sacred times, and days and years, and let them be lights in the vault of the sky to give light on the earth.” And it was so.” What was so? It was that as soon the stars were created, their light reached the earth instantaneously as God had commanded. Thus, the Bible uses ASC, which of course is compatible with all the physics that we know about. On the contrary, many atheists claim the Bible to be false because of this distant starlight problem, which undoubtedly is a strong argument. But that is because they use ESC which is not scientifically proven but rather was chosen to make the mathematics easier. Therefore, the universe is not billions of years old just because the galaxies are billions of light-years away but much younger (6000 years) as is written in the Bible.

I would like to conclude with my personal takeaway on this subject. Science has confirmed that nothing can go faster than the speed of light. Since high school, I had known the speed of light to be 300,000 km/sec. I was always confused why can’t anything travel faster than 300,000 km/sec. Why did God put a speed limit? I am sure He can make things go much faster. But now, when I came to know about ACS, and how the speed of light could be infinite, all my doubts

were clarified. ACS proves that God has no boundaries. He can make anything go as fast as possible even at infinite speed. There is no limit to His creation. His capabilities are endless because He is omnipotent or as Pastor Louie Giglio calls him “God of the impossible”. Even the Bible says in Luke 1: 37, “For with God nothing shall be impossible.” And I am really glad that I am a part of His family who can make things go at infinite speed just by His single breath. By His single command “Let there be light”, light shot off at infinite speed across the universe. What an amazing, powerful, Almighty God we have. And the best part is that He is my Father, He gladly calls me His child as well. Praise the Lord.

Acknowledgement:

I would like to give my heartfelt appreciation of gratitude to God who has given me this opportunity to write this article on the starlight problem. I express my sincere thanks to Dr. Jason Lisle as his articles and videos are the sources that I used to research on this topic. I am thankful for the language editing done by Esther Ruolngul and to Shikha Choudhary for her inputs on time dilation. I also am grateful for my parents and friends who have supported and encouraged me in completing this article.

For thus says the Lord, who created the heavens (He is the God who formed the earth and made it, He established it and did not create it a waste place, but formed it to be inhabited), “I am the Lord, and there is none else.

Isaiah 45:18

Bible Chang: Isai 1:18-20

Introduction

A thuhril lawk hai tamtak Isu Krista ah sukdi a um lein zawlnei Isai hih “The Messianic Prophet” ti a ko a ni a. NT a hin OT lekhabu dang dang nekin zawlnei Isai lekhabu hih a quote rawn tak a nih. Zawlnei Isai hin hril lawkna chau hi a thaw naw a, Pathien thu inhriettirtu (spokesman for God) khom a nih. Zawlnei Isai hming umzie chu “Lalpa sandamna” (salvation of the Lord) or “Lalpa chu sandamna anih” (the Lord is salvation) tina anih. A thu inhriettir hai hi ama hming umzie hin an entir nasa em em.

Background

Isai hun lai hih Juda lalramin harsatna (Political turmoil) lien tak a tuok hun lai a ni a. Assuria in a lalram hung zauin Israel lalram le Syria chu hmar tienga inthokin a hung do a. Assuria ral lien lo dang lêt dingin Israel le Syria hin Juda lalram chuh fiel hai sienkhom an koppui nuom naw a. Chuphing leh Israel lalram le Syria lalram chun Judah chu an bei hrawn ta a. Chuonga an bei hrawn phing chun Judah chun thrangpuitu dingin Assuriahai chu a hung beisei ta a. Zâwlnei Isai chun Judah Lal le mipuihai chu JEHOVA Pathiena in nghat ding le ram dang mihai chu inkoppui lo dingin nasa takin a hril phûr a. Sienkhom Juda lal Ahaz chun Isai thurâwn chu hnawlin Assuriahai chu thrangpuitu dingin a ko el ta a. Chuong chun thrang kopin Israel khawpui Samaria chu 772 BC khan an lak ta anih.

Sawt khom a riel hman hma chun an inkoppui Assuria hai chun Juda chu

hung bei ding angin an lang nawk nghal a. Chuphing leh simtienga Aigupta lalram chu thrangpuitu dingin a mel kai nawk nghala. Hi huna khom hin zâwlnei Isai chun tu le khom inzawm lo ding le Pathiena chau innghat dingin thurâwn a pek nawka. Lal Hezekia chun a lo ngaithlaka, chuongchun Pathienin a thrangpuita Assuria hai chu an hneban thei ta anih (Isai 36-37).

Sienkhom lal Hezekia chun, babulon palaihai a insung le a ro siekhawlina popo an entir ti zâwlnei Isaiin a hriet chun chuong ro popo chu nikhat chu babulon haiin a rengin la rût rip an ta, babulon tieng an la choi ding a nih tiin a hrillawka.

Hieng hun lai hin Pathienin zawlnei danghai Hosea le Mika hai khom chu a hmang ve zinga. Hosea chun a bik takin Israel lalram chunga thil tlung dinghai le Pathiena inthoka thu a hriethai chu a hrillawka hlaka. Mika le Isai ruok chun Juda lalram chunga hrillâwkna le Pathien thu an in hriettir hlak.

Let's see them one by one:

1.To synchronize the clocks using radio waves.

From A, we send out a radio wave. As soon as the radio wave hits B the atomic clock at B can be synchronized by knowing how much time the radio wave took to get to B. Which can only be known if we know the speed of the radio wave. The problem is, radio waves travel at the speed of light which is what we are trying to measure!

2.To synchronize the clocks from the start. Bring the two clocks together and synchronize them from the start. Now take one of the clocks to B. Would they still be synchronized? It turns out that the very act of moving the clock to B has caused it to tick a little bit slower than the clock at A because time flows differently for objects moving at different speeds and thus, the two clocks are not synchronized anymore.

3.To synchronize clocks using time dilation equations. We can synchronize the clocks by using the time dilation formula. The time dilation formula is used to measure how much time has passed for a moving observer relative to a stationary observer. The problem is the equation contains the speed of light which we are trying to measure! Thus to measure the speed of light we need to synchronize the two clocks. And to synchronize the two clocks we need to know the speed of light. We are stuck in a dilemma!

4.We place the radio transmitter at the midpoint of the two clocks. But that

assumes that the speed of light is the same in both directions which we don't want to assume!

Therefore, there is no way to measure the one-way speed of light, at least for the time being. Thus we all have accepted the speed of light to be the same in all directions by convention. This convention is called the “Einstein Synchrony Convention (ESC)”. The only reason is that mathematics becomes easier. Even Albert Einstein himself has concluded that there is no way of measuring the one-way speed of light without assuming that light travels at the same speed in all directions. We have to keep in mind that the other conventions including choosing the speed of light to be infinite in one direction and $c/2$ in the opposite direction are not wrong. Here we have got the option to choose the one-way speed of light.

The convention to choose the speed of light to be infinite in one direction (away from the source) and $c/2$ in the opposite direction (towards the source) is also called “Anisotropic Synchrony Convention (ASC)” If the Bible uses ASC, then it solves the distant star-light problem. Then light coming from distant galaxies would take no time at all to reach earth. This would mean that as soon as a star is born in the universe, its light reaches us instantly. There is no time delay.

Genesis 1:14 (NIV) says “And God said, “Let there be lights in the vault of the sky to separate the day from the night, and let them serve as signs to mark

time difference would be small and so not enough to alleviate the distant starlight problem. I believe we have a better solution to this.

Let us perform an experiment to measure the speed of light. Take two points in space A and B that are separated by 300,000km as shown in the figure. Take an atomic clock to record the time and place it at A. We took an atomic clock because it is the most accurate way to measure time till date.

Place a mirror at B facing towards A. Now, stand at A with a torchlight and switch it ON towards B. Start your stopwatch as soon as you switch ON your torchlight. The light would go towards B, get reflected by the mirror and then would come back at you at A. The time it took would be 2 seconds (because the speed of light we know is 300,000 km/sec). Most of us intuitively would conclude that the light took 1 second to go from A to B and then another second to return back to A. This would mean that we have assumed that the speed of light is the same when it goes from A to B and from B to A. Thus, we say that light travels at the same speed in all directions (most of us would assume that).

However, we would get the same result if we assume light took 0 seconds (instantaneous) to travel from A to B and the whole 2 seconds to get back to A. It is also possible that light took 1.5 seconds from A to B and 0.5 seconds from B to A.

All we know is that light took 2 seconds for the round trip, and so in any case, to get its average speed we divide the total distance traveled by the total time taken which is 300,000 km/sec. If the speed of light was instantaneous when going away from the source (A to B), there would not be any starlight problem. We may also question why the speed of light would be different in different directions. Honestly speaking, I don't know the answer. But then again, why should it be the same in all directions. We really can't conclude these assumptions without proper scientific experiments. Well then, what is the "one-way speed of light"? Is there no way to measure it? To do that let's perform another experiment.

Consider the same experiment as above. But replace the mirror at B with a detector and an atomic clock along with it. The important thing here is to synchronize the two clocks at A and B, meaning that they should flow at the exact same rate at all moments, if not then we would get the wrong results. Now, switch ON your torchlight and the clocks at A and B. Then as soon as the light hits the detector, record the time. Both the clocks should show us the same time. If not, then we would get erroneous results, meaning the clocks should be "SYNCHRONIZED" at all times. Thus, divide the same distance by the time we recorded and we get the speed of light. Pretty simple! right? However, synchronizing two clocks separated by some distance is a task that is next to impossible. Many methods were tried.

Israel le Juda hnamhai chu nasa-taka Pathienka inthoka helin Pathien thuth-lung danhai chu an bawsiet. An suolna leia Pathien hremna hung tlung ding chu an pumpel theina dingin sim dingin Isai chun an hriettir hlaka. earth in a much shorter time.

Science has repeatedly tested and confirmed that if light’s speed was altered by even so slightly, then the forces between subatomic particles would change and the universe may not have existed as we know now. Life would not even be possible. Thus, the speed of light has always been 299 792 458 m/sec since the beginning of creation.

d) God created the farthest galaxies and the distant stars much before he created the earth. In Genesis it is written, “In the beginning, God created heaven and the earth”. Also, in Psalms, it says “He stretches out the heavens like a tent”. The accelerating expansion of the universe was discovered in the 1920s. This observation was already recorded in the Bible as “stretches out the heavens”. There are also several other places in the Bible where heaven denotes the universe. Clearly, “heaven” in Genesis chapter 1 denotes the universe which consists of billions of galaxies that we observe in the night sky.

e) Many believe that the stars were made not in a single earth day. To support their statement they bring in the verse 2 Peter 3:8 (NIV) “With the Lord a day is like a thousand years, and a thousand years are like a day”. Thus it would seem that when God created those stars on the 4th day, that day was actually much longer than a normal 24 hour day. However, when we look at the context, the following verse says “And there was evening, and there was morning—the fourth day”.

This means that it was a normal solar day. Exodus 20:11 (NIV) says “For in six days the LORD made the heavens and the earth, the sea, and all that is in them, but he rested on the seventh day”. These verses conclude that all the distant galaxies were created in a single 24 hour earth day.

f) Gravitational time dilation This is a possible solution to the distant starlight problem. This theory states that time flows differently in the presence of gravity. In fact, gravity slows downtime. This means that in space where light is traveling to reach our earth, it would have traveled for a longer time while on earth a lesser time may have passed. As an example, while a thousand years would have passed on the earth’s surface, time passed at a height of 40,000 km from the earth’s surface would only be 19 seconds longer. I know the time difference is vanishingly small, but it is present. In this example, we have only taken earth’s gravity into account. But when light from distant galaxies reaches earth, we will have to consider the masses of other heavenly bodies. The mathematics becomes quite complex. A much in-depth analysis and rigorous experiments still need to be conducted to accurately determine how gravity affects the time taken by distant starlight to reach earth. This could solve the starlight problem. However, I believe that even if we were able to accurately determine the time difference considering all necessary factors, it would not be of much help because the

Distant Starlight problem solved by the Bible

By: Laldawmsang Pulamte

The Bible tells us that the earth is around 6000 years old.

I have always believed that everything written in the Bible is 100% true. However many scientists and most of the world believe that the universe is billions of years old. One of the reasons for their belief is that since we are able to observe galaxies billions of light-years away, hence light emitted from them must have taken billions of years to reach earth. I too didn't know how to counter this argument with concrete evidence. It would seem that science and the Bible contradict each other, which I refuse to believe. I have always believed that the universe is much younger, but I just did not know how to prove it. That was until Veritasium (a youtube channel) made a video on how the speed of light could be infinite. It completely blew my mind. Since childhood, I have always been taught that the speed of light is 300,000 km/sec. But now someone is telling me that it could be infinite? Hence I decided to do more research into this. In this article, I am going to share the proof of how the Bible solves this distant starlight problem. A common misconception is that we confuse a "light-year" to be a measure of time, but the truth is that it is a measure of distance. One light-year is the distance traveled by light in one year which is 9.46 trillion km (The speed of light denoted as "c" is approximated to be 300,000 km/sec). To get a perspective of this enormous distance, if the earth was shrunk down to the size of a cell, one light-year would be the distance between Delhi and Manipur.

Many possible reasons have been considered and tested. Some of them are as follows:

a) The galaxies are not really that far away from us. Observational astronomy has confirmed that the galaxies are indeed separated by enormous distances.

b) The light coming from these galaxies were created by God in transit, meaning that light did not come from those distant galaxies or stars but was created midway. This would mean that everything that we observe in the sky (99.9999% i.e. anything beyond 6000 ly) is fiction. It's not real. It would mean that

all those supernovas (exploding stars), far away galaxies and the many heavenly phenomena we see in the sky are not real. Which would mean that God likes fiction. If that is the case the everyday things we see around us might not really exist, they are just images that God wants us to see. I highly doubt God, although He has the capability to do it, would make us see and believe unrealistic things.

c) The speed of light was much faster in the past and thus, it was able to reach

ei ti lem ding a ni laiin, Ama lemin hung ro ngaituo tlang ei tiu ami ti hih ngaipo-imaw hmasak chi niin ei hriet am?
